## **SL4J Logging exercises**

## **Exercise 1: Logging Error Messages and Warning Levels**

```
import org.slf4j.LoggerFactory;
import org.slf4j.LoggerFactory;
public class LoggerExample {
    private static final Logger logger = LoggerFactory.getLogger(LoggerExample.class);
    public static void main(String[] args) {
        logger.info("This is an info message");
        logger.warn("This is a warning!");
        logger.error("Something went wrong!", new RuntimeException("Error details"));
        logger.debug("Debugging application...");
    }
}
```

## Output:
